## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-15, drawn to a method of identifying a receptor, classified in class 436, subclass 507.
  - II. Claims 16-30, drawn to a method of identifying a ligand, classified in class 435, subclass 7.92.
  - III. Claims 31-56, drawn to a method of identifying a compound that mediates the binding activity between a known ligand and a known receptor, classified in class 436, subclass 536.
  - IV. Claims 57-62, drawn to a method of identifying for a compound that blocks viral entry and inhibits viral infection, classified in class 435, subclass 235.1.
  - V. Claim 63-64, drawn to a composition for use in identifying specific binding activity between a ligand and a receptor, classified in class 436, subclass 543.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the feature of identifying a receptor in a sample by using a known ligand covalently to threshold receptor in invention I, is not required by the claims of other group. The feature of identifying a ligand from a plurality polypeptides by using a known receptor in invention II, is not required by the claims of other group. The feature of contacting the complex of a known receptor and a known ligand with a compound in invention III, is not required by the claims of other group.
3. Inventions III and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require

Art Unit: 1641

the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention III does not require the feature of using a viral envelope as a ligand and a cellular viral receptor protein. The subcombination has separate utility such as using for purification and isolation purposes.

4. Inventions V and I-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product in invention V, can be practiced with another materially different process, such as identification, isolation or purification.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for one group is not required for the other, and the search for one group is not required for another group, therefore restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
